

When starting a new scene, any asset or video stream that you drag and drop in the scene will appear as a **floating asset**

To have a stream or asset occupy the full scene background, simply click on the lock icon in the scene menu (it will then appear as “unlocked”)...

...and drag and drop in the scene the video stream or asset that you would like to occupy the full background

Any additional video stream or asset added after that will appear as floating assets over the locked background

To remove a background, simply delete it by doing a right-click on the background and select the “delete” option from the menu.
